

CONTROLLED AUTONOMOUS MONITORING

- Project X-CAM is a cutting-edge **Autonomous System**, designed to surveil designated areas on pre-defined routes and provide live data feed.
- It also addresses flight time limitations by incorporating a smart auto charging system, which ensures seamless power transmission, giving non-stop performance.

X-CAM Drone Tech

Automation:-
Drone is programmed to follow a pre-defined path. It is also equipped with Obstacle Avoidance Sense.

Battery Sense:-
Drone will be equipped with Smart Battery Sense, which will enable it to sense battery level and function accordingly.

Charging Pad:-

We have designed a custom Charging Pad Technology, which will have auto-regulations of voltages, and will enable the drone to charge itself whenever it lands on the pad.

APPLICATIONS

- Police and Military
- Highway Patrolling
- Traffic Monitoring
- Disaster Management
- Security Applications
